SPIN PAD handy terminal

Many customers have specific orders about the drinks and the food that they want served. This restaurant EPOS system allows you to send exact orders so that the food is prepared quickly and according to the specifications of the customer. You can also program the PI Handy to do upsells and recommend specific dishes at the restaurant. Ultimately, it all boils down to a massive increase in cost savings for your restaurant and a much higher turnover.

Features

- Order taking at the customer's table
- Dallas key reader for access to manager functions
