

Thermal Printer TP-16II PS

High quality thermal printers

TP16 (ticket) printer is a high-end thermal printer. This rugged printer is perfectly adapted for heavy catering environments. The printer status is available on the POS body via a specially developed communication protocol. This ensures a fast and reliable data transfer between the POS and the printer(s).

The TP16 printers are available as a note, bar and kitchen printer. The TP16 is also available as a wireless radio printer. Ideal for placing as a printer on the terrace through a built-in battery.

The TP16 printers

- Robust printer for invoices and kitchen printer.
- High-speed thermal printing (180 mm / sec, about 40 lines per second)
- Easy paper loading (drop the roll and ready)
- Auto tear.
- Paper end sensors.
- Can be installed horizontally and vertically (special kitchen walls)
- High quality graphic logo and text printing in reverse (white on black, for kitchen texts, etc)
- Ability to interface cabling over long distances or to avoid interference problems.
- Communication protocol that lets you manage the printer states: off, out of paper and fold open.
- Integrated buzzer, capable of being enabled or not. In practical use to alert the receiver in the kitchen or out of paper.
- Optional splash cover.
